

31 October 2007

PRESS RELEASE EURO AREA ECONOMIC AND FINANCIAL DEVELOPMENTS BY INSTITUTIONAL SECTOR: SECOND QUARTER 2007

In the second quarter of 2007, the annual growth rate of net disposable income in the <u>euro</u> <u>area</u> equalled 5.0%, compared with 5.6% in the first quarter of 2007 (see Annex Table I). The annual growth of consumption was 3.0% in the second quarter, which was lower than in the first quarter (3.4%). In the second quarter the annual growth rate of net saving equalled 28.2%, compared with 33.5% in the previous quarter. The annual growth rate of gross fixed capital formation was 7.4% in the second quarter of 2007, compared with 11.1% in the previous quarter.

The annual growth rate of **households'** gross disposable income equalled 3.8% in the second quarter of 2007, compared with 4.3% in the previous quarter (see Table 2). The annual growth rate of gross saving of households decreased to 7.5%, after 11.4% previously, and their gross saving rate in the last four quarters equalled 14.1%. The annual growth rate of **financing** of households decreased to 7.4% in the second quarter, from 8.0% in the previous quarter, and the annual growth rate of their **financial investment** remained unchanged at 4.0%.²

The annual growth rate of **gross fixed capital formation of <u>non-financial corporations</u>** in the euro area amounted to 9.3% in the second quarter of 2007, compared with 11.1% in the previous quarter (see Table 3). The annual growth rate of **financing** of non-financial corporations increased to 5.1% in the second quarter, from 4.9% in the previous quarter and the annual growth rate of their **financial investment** remained broadly unchanged at 6.2%.

Euro area

In the second quarter of 2007, the annual growth rate of euro area **net disposable income** decreased to 5.0% from 5.6% in the previous quarter. The growth of euro area

¹ The euro area accounts are expressed in current prices and they are not seasonally adjusted. Ratios are based on four-quarter cumulated sums. The (nominal) growth rates are presented as year-on-year changes (see the notes).

² Financing and financial investment comprise all financial instruments for all sectors except general government. In line with existing conventions, the financing of the government excludes the net incurrence of liabilities via financial derivatives, shares and other equity, pension fund reserves and other accounts payable, and the financial investment of the government excludes prepayments of insurance premiums and reserves for outstanding claims and other accounts receivable.

disposable income continued to accrue mainly to households and government (see Chart I). Euro area **net saving** continued to grow at a high annual rate (28.2%), but somewhat less than in the previous quarter (33.5%). While household and government savings continued to grow strongly, the contribution of corporations to the overall saving growth moderated. The decrease in the annual growth of **gross fixed capital formation** (7.4%), compared to the previous quarter (11.1%), was due to a lower investment growth by all sectors (see Chart 2). The growth rate of **total gross capital formation** in the second quarter decreased as well (to 7.7%, from 9.1%). These developments were reflected in a growing **current account surplus of the euro area** with the rest of the world, or a negative foreign saving (see Chart 3).

Households

The annual growth rate of households' **gross disposable income** decreased to 3.8% in the second quarter of 2007, from 4.3% in the previous quarter (see Table 2). This deceleration was mainly driven by a decrease in the annual growth rate of **compensation of employees**, to 3.9%, from 4.5% in the previous quarter, and by a higher increase of households' **tax payments**; the annual growth rate of households' taxes on income and wealth increased to 6.6% from 4.6% previously (see Chart 4).

The annual growth rate of households' **consumption expenditure** (3.1%) was lower than that of their disposable income and hence the four-quarter average household gross saving rate increased, to 14.1%. The net lending of households increased only slightly as the increase in households' saving was almost matched by the increase in households' **non-financial investment** (see Chart 5). Yet, the growth rate of their gross fixed capital formation decreased to 6.9%, from 11.1% previously.

The annual growth rate of **financing** of households via the incurrence of loans in the euro area decreased to 7.6% in the second quarter, from 8.1% in the previous quarter. This coincided with an unchanged growth of their **financial investment** of 4.0% per year.

Turning to the components of **households' financial investment**, the annual growth rate of their holdings of currency and deposits increased to 5.6% in the second quarter from 5.4% the previous quarter. The annual growth rate of their investment in debt securities decreased to 4.1%, from 5.4% previously. The growth rate of their investment in shares and other equity recovered somewhat (0.3%, after -0.1%). Specifically, the annual growth rate of their investment in unquoted shares and other equity was a bit higher and their annual sales of mutual fund shares were a bit lower than in the previous quarter. Yet, households

³ For the households and non-financial corporations sectors, the figures for net lending / net borrowing derived from the financial accounts may differ from those derived from the non-financial accounts, due to statistical discrepancies.

became net sellers of quoted shares. The annual growth rate of their additions to life insurance and pension fund reserves remained broadly unchanged at 5.7%.

All in all, the annual growth rate of households' **net financial wealth** increased to 6.6%, from 5.5% in the previous quarter, as households benefited from increased holding gains on financial assets, in particular quoted shares and mutual fund shares (see Chart 6).

Non-financial corporations

The **net entrepreneurial income** of non-financial corporations⁴ grew at an annual rate of 8.0% in the second quarter of 2007, after 4.8% in the previous quarter (see Table 3). This increase of the growth rate can be largely explained by a higher increase in their property income receivable, which includes the profits of foreign subsidiaries (see Chart 7).

The annual growth rate of **gross fixed capital formation** of non-financial corporations decreased to 9.3% in the second quarter of 2007 after 11.1% in the previous quarter (see Chart 8), whereas the annual growth rate of total gross non-financial investment increased to 9.5% from 7.4% as inventories were less reduced than a year ago. At the same time, saving ("retained earnings") of these corporations decreased and thus their net borrowing increased.

In the second quarter of 2007, the annual growth rate of **financing** by non-financial corporations increased to 5.1%, after 4.9% previously. The growth rate of their loan financing was unchanged at 10.3%, while the annual growth rate of their issuance of debt securities increased to 8.5%, from 6.5%. The annual growth rate of their equity financing, via the issuance of shares and other equity, increased to 2.1%, from 1.9% previously (see Table 3).

As regards the **financial investment** of non-financial corporations, the annual growth rate of their investment in currency and deposits decreased to 12.8%, from 13.8% previously. The growth rate of their investment in shares and other equity increased from 3.0% to 3.3%.

Insurance corporations and pension funds

The annual growth rate of **insurance technical reserves**, the major financing instrument of insurance corporations and pension funds, remained broadly stable, at 6.2% in the second quarter of 2007 (see Table 6). The annual growth rate of the issuance of quoted shares by this sector increased to 1.9%, from 1.5% previously. The annual growth rate of their **financial investment** remained broadly stable at 6.2%. The growth rate of their

⁴ Entrepreneurial income is broadly equivalent to current profits in business accounting (after the receipt and payment of interest and including the profits of foreign subsidiaries, but before the payment of income taxes and dividends).

investment in debt securities increased to 9.2%, from 7.9%, and that of their investment in shares and other equity decreased to 3.3%, from 4.2%.

Additional information on the euro area accounts

This press release incorporates revisions for the first quarter of 2007 and for previous quarters. These revisions have not substantially altered the main aggregates that were previously published.

The euro area accounts encompass integrated non-financial and financial accounts, including financial balance sheets. These quarterly European sector accounts are jointly compiled by the ECB and the European Commission (Eurostat), in close cooperation with the national central banks and the national statistical institutes in the EU.⁵ The European sector accounts follow the methodology of the European System of Accounts 1995 (ESA 95)⁶.

A detailed set of quarterly data is published in Tables 3.1 - 3.5, "Euro area accounts", of the statistics section of the ECB's Monthly Bulletin. An explanation of the relationship between several variables in the tables of this press release is provided in the General Notes for that section of the Monthly Bulletin. A comprehensive set of tables is made available at http://www.ecb.eu/stats/acc/html/index.en.html (ECB). The time series for the euro area accounts can be downloaded from the ECB's Statistical Data Warehouse (SDW).

The publication of euro area economic and financial developments in the third quarter of 2007 is scheduled to take place on **I February 2008** at 10.00 am (CET).

Notes

The annual growth rate of non-financial transactions and of outstanding financial assets and liabilities (stocks) is calculated as the percentage change between the value of the transaction or outstanding amount for a given quarter and that value recorded four quarters earlier. Let x_t be the level of a non-financial transaction or end-of-quarter stock, then its annual percentage change $g(x_t)$ is calculated as:

$$g(x_t) = \frac{(x_t - x_{t-4})}{x_{t-4}} * 100.$$

• The annual growth rate used to analyse financial transactions refers to the total value of transactions during the year in relation to the outstanding stock a year before. These growth rates for financial transactions exclude the effect on the outstanding stock of revaluations, reclassifications, and further changes that do not arise from transactions. When f_t represents the value of transactions in a particular financial instrument, and F_t represents the value of the corresponding stock outstanding at the end of quarter t, then the annual growth rate $g(f_t)$ is calculated as the sum of the transactions during the year divided by the outstanding stock a year ago:

$$g(f_t) = \left(\sum_{i=0}^{3} f_{t-i} / F_{t-4}\right) * 100$$

Sources: ECB and Eurostat

1) Households and non-profit institutions serving households.

2) Annual percentage changes are calculated as 100*(x_t-x_{t-4})/x_{t-4} where x_t stands for the transaction or end-of-quarter stock x in quarter t, and x_{t-4} for the transaction or stock four quarters earlier.

 $^{3) \} Net \ adjustment \ for \ the \ change \ in \ net \ equity \ of \ households \ in \ pension \ fund \ reserves \ (receivables - payables).$

⁴⁾ Changes in inventories, acquisitions less disposals of valuables and acquisitions less disposals of non-produced non-financial assets (e.g. land).

⁵⁾ Annual growth rates for financial transactions are calculated as $100^*(f_1+f_{t,1}+f_{t,2}+f_{t,3})/F_{t,4}$ where f_1 stands for the transactions in quarter t, and $F_{t,4}$ for the end-ofquarter stock value four quarters earlier.

⁶⁾ Loans granted, prepayments of insurance premiums and reserves for outstanding claims and other accounts receivable.

⁷⁾ Financial derivatives, pension fund reserves and other accounts payable.

Sources: ECB and Eurostat

¹⁾ Annual percentage changes are calculated as 100*(x_t-x_{t-4})/x_{t-4} where x_t stands for the transaction or end-of-quarter stock x in quarter t, and x_{t-4} for the transaction or stock four quarters earlier.

²⁾ As a percentage of net value added in the case of net entrepreneurial income and net saving.

³⁾ Changes in inventories, acquisitions less disposals of valuables and acquisitions less disposals of non-produced non-financial assets (e.g. land).

⁴⁾ Annual growth rates for financial transactions are calculated as $100^*(f_t+f_{t-1}+f_{t-2}+f_{t-3})/F_{t-4}$ where f_t stands for the transactions in quarter t, and F_{t-4} for the end-of-quarter stock value four quarters earlier.

⁵⁾ Other accounts receivable, and prepayments of insurance premiums and reserves for outstanding claims.

⁶⁾ Other accounts payable, financial derivatives and deposits.

Sources: ECB and Eurostat

¹⁾ Annual percentage changes are calculated as $100^*(x_t^-x_{t-4})/x_{t-4}$ where x_t stands for the transaction or end-of-quarter stock x in quarter t, and x_{t-4} for the transaction or stock four quarters earlier.

²⁾ Changes in inventories, acquisitions less disposals of valuables and acquisitions less disposals of non-produced non-financial assets.

³⁾ Annual growth rates for financial transactions are calculated as $100^*(f_{t^4}f_{t-1}+f_{t\cdot2}+f_{t\cdot3})/F_{t\cdot4}$ where f_t stands for the transactions in quarter t, and $F_{t\cdot4}$ for the end-of-quarter stock value four quarters earlier.

⁴⁾ Other accounts receivable, and prepayments of insurance premiums and reserves for outstanding claims.

⁵⁾ Other accounts payable, pension fund reserves, financial derivatives and unquoted shares and other equity.

⁶⁾ General government debt at nominal value and consolidated between sub-sectors of general government.

¹⁾ Annual percentage changes are calculated as $100^*(x_t-x_{t-4})/x_{t-4}$ where x_t stands for the transaction or end-of-quarter stock x in quarter t, and x_{t-4} for the transaction or stock four quarters earlier.

2) As a percentage of net value added in the case of net entrepreneurial income and net saving.

³⁾ Changes in inventories, acquisitions less disposals of valuables and acquisitions less disposals of non-produced non-financial assets (e.g. land).
4) Annual growth rates for financial transactions are calculated as 100*(f_t+f_{t-1}+f_{t-2}+f_{t-3})/F_{t-4} where f_t stands for the transactions in quarter t, and F_{t-4} for the end-of-quarter stock value four quarters earlier.
5) Monetary gold and SDRs, other accounts receivable, and prepayments of insurance premiums and reserves for outstanding claims.

⁶⁾ Other accounts payable and financial derivatives.
